

DbKeyHashSet

Mon, Aug 26, 2019 [HashSets](#)

DbKeyHashSet

A DbKeyHashSet is a HashSet that can contain DbKeys.

See also [HashSets](#). The Code example below shows how to use an ObjectHashSet.

Code example

```
public ObjectHashSet<BasketItemEntity> SelectedBasketItems { get { return Property(() => new ObjectHashSet<BasketItemEntity>(BasketItems.Type.ItemType)); }}
```

In short, the same can be coded like this.

```
public ObjectHashSet<BasketItemEntity> SelectedBasketItems => Property(() => new ObjectHashSet<BasketItemEntity>(BasketItems.Type.ItemType));
```
