 - [Explanation of the example](#)

What it is

BlobNvlExpression is used specify how to treat a NULL value in a Blob property (or field or variable). If the Blob appears to be NULL, it will be assigned a default value or a specified value.

- See [LINQ](#) for details about LINQ and the AI-Framework.
- Go to the category for [all LINQ expressions](#).

Code example

```
public ReadOnlyBlobProperty BlobNvlExample{ get { return Calc  
ulatedBlobProperty(() => Operation.EditItem.Image.Nvl(CommonI  
mages.OkIcon.ConvertToBlob())); } }
```

Explanation of the example

The example above works as follows.

- Line 1 defines a `ReadOnlyBlobProperty` with the name `BlobNvlExample`.
- In Line 5 and 6 the content of this property is going to be calculated and assigned.
- In line 6, the `Blob Operation.EditItem.Image` is evaluated, by adding `.Nvl`.
- If the Blob appears to be `NULL`, then `BlobNvlExample` will be assigned the value after `Nvl` between parentheses (`CommonImages.Accept.ConvertToBlob()`), which is a `Blob`.
